THE MOUTHPIECE SOLUTION

LUNG FISH

MOUTHPEICE

Unique, highly optimized ergonomic design.
Maximum flow, minimum dead space: low resistance, low CO₂ retention.

One-finger operation yet no possibility for accidental operation.
Status clearly visible to user and buddy.

Hoses angled for unobstructed view, minimum jaw fatigue and streamlining.

Low overall width for unrestricted head movement.

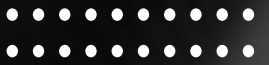

Head strap option for increased safety or use in strong currents.
Surface breathing hole on top allows for breathing on surface!

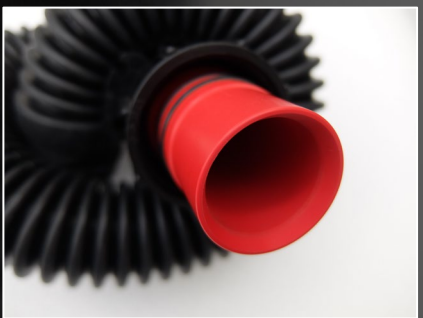

Purge path allows total removal of water when going on the loop underwater.

LUNG FISH

Left or right-handed setup possible: one way valves combined with hose cuffs prevents risk of loop reversal.

Cuff / Valve assemblies give full compatibility with ALLIANCE full face mask.

Available with different connectors for use with different rebreathers and hoses.
